AERO WOUND™

TRAUMA WOUND DRESSING

- UKCA Marked

For easy application, our **AeroWound™ Trauma Dressings** are recommended for major surface wounds and injuries. The AeroWound™ Trauma Dressing offers greater support for wounds that require compression, including an extra absorbent wound pad and elasticated bandage. This product aligns with our RapidStop® Bleed Control Kits and Tourniquets, supporting casualties with serious surface wounds and bleeds. As a perfect accompaniment for any first aid kit, the trauma dressing is elastic, which means it can conform to any medium wound. For bleed control, the plastic retention clip allows pressure to be applied in order to stem bleeds. Its supportive and comfortable design affords greater wound protection from foreign objects and bacteria, allowing the wound to heal. The dressing offers superior quality and comfort upon use. It is also classed as sterile. Recommended for major wounds, its extra absorbent pad collects body fluids and minimises dressing changes.
