AERO SHIELD™

CPR FACE SHIELDS AND CPR MASK

- MDD Compliant
- UKCA Marked

Our **AeroShield™ CPR Face Shields** and **AeroMask™ CPR Masks** give first aiders a way to deliver rescue breaths during CPR without direct mouth-to-mouth contact. By creating a barrier between the first aider and the casualty, they help reduce exposure to saliva, blood and other bodily fluids.

The range includes compact face shields with one-way valves, keyring pouches for first aiders on the move, and cushioned CPR masks in protective carry cases. These options make it easy to keep a breathing barrier close at hand, whether carried by an individual first aider or stored in a workplace first aid kit.
