

ELASTIC COTTON CREPE BANDAGE

- ✓ MDD Compliant
- ✓ UKCA Marked & CE Marked

With its high-quality cotton design, our AeroCrepe™ Elastic Cotton Crepe Bandage offers a premium first aid solution. Its elastic properties allows users greater comfort and manoeuvrability around joints and body contours. Thanks to its elasticity, it can also be used as a retention dressing where necessary. This product is classed as non-sterile but can be used alongside sterile products to secure smaller pads. It is recommended for light support and is ideal for soft tissue injuries or gentle coverage for small wounds that are healing. The Crepe Bandage is ideally suited for use with immobilisation or compression techniques, offering comfortable support for the casualty whilst further treatment takes place. The bandage is suitable for keeping joints still during elevation. Comes as a pack of 12 containing AeroCrepe™ Elastic Cotton Crepe Bandage, suitable for immobilisation and compression techniques.
