

## HSE/AMBULANCE DRESSINGS

- ✓ MDD Compliant
- ✓ UKCA Marked & CE Marked

The AeroWound™ HSE Dressings are excellent for preventing bacteria entering into a wound. For easy application, the AeroWound™ HSE Dressing is recommended for sizeable surface wounds and injuries. Including an extra absorbent wound pad and elasticated bandage, these dressings offers greater support for wounds that require compression. They're HSE-compliant and can be added to workplace first aid kits. As a perfect accompaniment for any first aid kit, the extra large dressing is elastic, which means it can conform to any significant wound. It is also classed as sterile. Recommended for sizeable wounds, its extra absorbent pad collects body fluids and minimises dressing changes. Its supportive and comfortable design affords greater wound protection from foreign objects and bacteria, allowing the wound to heal. Our range of AeroWound™ HSE Dressings are ideal for any type of first aid kit, including personal first aid kits.
